Crossings between Single early and Darwin Tulips. Flowering-time just between these two classes. Enormous flowers on tall stems of about 22 inches.

Most of them have excellent forcing qualities too. They force much easier than Darwins and only need about 3 weeks in the hothouse.

TULIPAS

(SPECIES OR BOTANICAL TULIPS)

The earliest of all tulips!

These are the original „wild tulips“, found in the woods of Turkey and Asia Minor and which were improved and meliorated by the Dutch growers. Excellently suited for small groups or for planting in the rockery. The botanical tulips flower almost two weeks before the early tulips and it may be said that they open the „Tulip season“.

Caesar Franck , large and strong flowers, glowing scarlet with a golden yellow edge. The earliest of all Tulips and a wonderful fine novelty of the highest value	p. 100 \$ 16.—
Dasystemon , a rather strange variety, each bulb giving 4 or 5 broad open white flowers with yellow centre. Very dwarf flowering. A real rockery tulip. Height 6 inches. Limited stock	5.—
Eichleri , a most favored rockery tulip, large crimson-scarlet flowers, with a lighter shade on the outside petals. Yellow and black-centre. Height 12 inches. A very strong flowering variety, lasting for weeks	3.50
Fosteriana Cantate , brilliant vermilion-red. Enormous large flower. The foliage is most beautiful, broad shiny dark green leaves	6.50
Fosteriana Mad. Lefeber , the largest and most beautiful tulip, we have ever seen, resembling a gigantic poppy. The enormous large vermilion-scarlet flowers on high and strong stems give a brilliant effect when planted in groups. Please give this tulip the best place of your garden, protecting it against hard winds, and you will enjoy its beauty for several weeks. When half opened, the flower shows its marvellous butterflyheart, colored deep black, bordered by a yellow edge. Height 22 inches	6.—
Fosteriana Princeps , nearly the same flower as Mad. Lefeber, but the stems are only 12 inches. Therefore for real rockery-work, this variety is often preferred. Moreover it flowers about a fortnight later than Mad. Lefeber. We advise you to order both sorts, so that you can compare them for yourself	6.—
Kaufmanniana „Elliott“ , an improved „Waterlily Tulip“ producing long shaped clear red flowers with white borders. A nice and attractive new variety with a fine orange-yellow centre. Height 15 inches	6.50
Kaufmanniana „Gaiety“ , very dwarf flowering variety. The flowers seem to creep over the ground. Very nice, especially when the flowers are open. The petals seem to cover the ground and you can enjoy the wonderful beauty of its yellowish heart. Outside petals red with creamy border. This is the real Waterlily tulip	6.—
Kaufmanniana „Vivaldi“ , a wonderful new variety, growing about 15 inches high and producing nice and strong flowers of a beautiful orange-red color with yellow border. The green leaves have brown stripes and spots. Highly recommended	6.—
Praestans „Fuselier“ , an early flowering variety, producing two or more very fine orange-scarlet flowers on each stem. Very striking	5.50
